

How is your Investment Manager doing?

*Investment Grade Bonds

*Core Bond Mandate benchmarked to the Bloomberg Aggregate which returned -0.40% over the same period

On a \$10MM portfolio that's ~\$750K difference over just the past 5 years in a very unfavorable bond market cycle

It is important to note that approximately 90% of the active bond managers beat the Bloomberg Aggregate. Peer group analysis and manager quartile rankings help define the manager's ranking compared to their competitors. CapVisor Associates, LLC selects managers using a proprietary methodology based upon the CFA Institutes' prescribed process. This involves taking only top quartile performing candidates from a database of 3,000+ US Investment Managers. Our scoring algorithm uses 13 modern portfolio theory statistics and ranks managers by skill - emphasizing superior returns per unit of risk across market cycles.
